

# *Holes To Go Advantages*

Holes To Go Mini Golf Rental is owned by two partners who have been in the miniature golf industry for over 25 years each. We have seen all kinds of courses made, produced, built, created, and thought of over the years.

We put a lot of thought into what kind of holes we want to produce and rent to the public. Our holes are constructed of dense foam and a coating is applied several times over the material to make both a safe and fun course.

There are courses available for rent that are not the highest quality product on the market. The old wooden style of course has been around for years and has also not changed much to improve the product.

Here is a chart to see the advantage of Holes To Go holes versus an “old style wooden course”.

## *Holes To Go*

## *Wooden Course*

Safe to play	Wooden right angles
Grass turf putting surface	Felt putting surface
Built in undulation and banks	Right angles made out of wood
Foam/coating construction	Wood construction
Faux brick edging/border	2 x 4 edging/border
Faux rocks	No rock look
Appealing look of holes	Boxy look
Smooth surface	Possible nails or screws coming out

Overall, Holes To Go course are more visually appealing. They look and play like a real green. They are more fun and challenging to play for people of all ages.

All of the pictures and events you see on our website show our holes in use. We never use stock pictures or anyone else’s pictures. This assures that you know what you are getting, whether you are renting a course or purchasing one. Quality matters!
